TON
Finishes.

Wood, colours and surface finishes.

Wood is a fascinating material that is beautiful and pleasing both to the eye and to the touch; it has a characteristic smell, texture and colour, and is synonymous with a safe approach to the environment.

Wood is a renewable resource, does not pose any danger to human health and is no burden to the environment – not during its processing, while the products are used, nor after they have reached the end of their life. By planting new trees, their life cycle starts again. Unlike modern materials, wood can age and acquires a unique maturity and patina over the course of time.

Upholstery.

Natural materials make up more than 50% of many fabrics. All upholstery materials, especially those with high wear resistance, are suitable for use in public areas. Many of them also fulfil the safety requirements for self-extinguishing. In compliance with environmental protection, these materials fulfil the requirements of EU regulations or other internationally recognised organisations.
